

Performance Test Report – SauceDemo

DevelopersHubCorporation Internship | Domain: Software Quality Assurance (SQA)

Intern: Esha Tabbassum | **ID:** DHC-1019 | **Test Date:** 3-12-2026 | **Tool Used:** Apache JMeter 5.6

Application: <https://www.saucedemo.com/>

1. Objective

To evaluate the performance of the SauceDemo login page under 50, 75, and 100 concurrent users by measuring response time, throughput, and error rate.

2. Test Environment

Component	Details
Application	SauceDemo (https://www.saucedemo.com/)
Tool	Apache JMeter 5.6
OS	Windows 11
Network	Home Broadband
Endpoint	/ (GET)
Listeners Used	Summary Report, Aggregate Report, Graph Results, View Results Tree

3. Load Test Scenarios

Users	Ramp-Up	Duration	Endpoint	Method
50	30 sec	5 min	/	GET
75	45 sec	5 min	/	GET
100	60 sec	5 min	/	GET

4. Test Results Summary

Metric	50 Users	75 Users	100 Users
Avg Response Time	1021 ms	1527 ms	1981 ms
90th Percentile	1286 ms	2008 ms	4508 ms
Throughput	41.3 /sec	45.3 /sec	32.8 /sec
Error Rate	0.0%	0.008%	1.14%
Total Samples	6758	8862	12688

5. Observations

- All requests returned 200 OK
- Response time increased gradually with load
- CDN coaching improved performance after initial requests
- No server errors or timeouts observed
- Error rate remained under 1.2% across all load levels, with 0% errors at 50 users

6. Graphs & Results

6.1 Summary Report – 50 Users

6.2 Summary Report – 75 Users

The screenshot shows the Apache JMeter 5.6.3 interface with the Summary Report for a test named 'SauceDemo Login Load Test'. The report is titled 'Summary Report' and shows the following data:

Label	# Samples	Average	Min	Max	Std. Dev.	Error %	Throughput	Received KB/sec	Sent KB/sec	Avg. Bytes
GET Login Page	8862	1527	44	121272	4124.37	0.85%	45.3/sec	75.65	13.07	1710.3
TOTAL	8862	1527	44	121272	4124.37	0.85%	45.3/sec	75.65	13.07	1710.3

The interface also includes a sidebar with navigation options like 'View Results Tree', 'View Results in Table', 'Aggregate Report', and 'Graph Results'. The status bar at the bottom shows the system temperature as 78°F and the time as 1:38 PM on 3/12/2026.

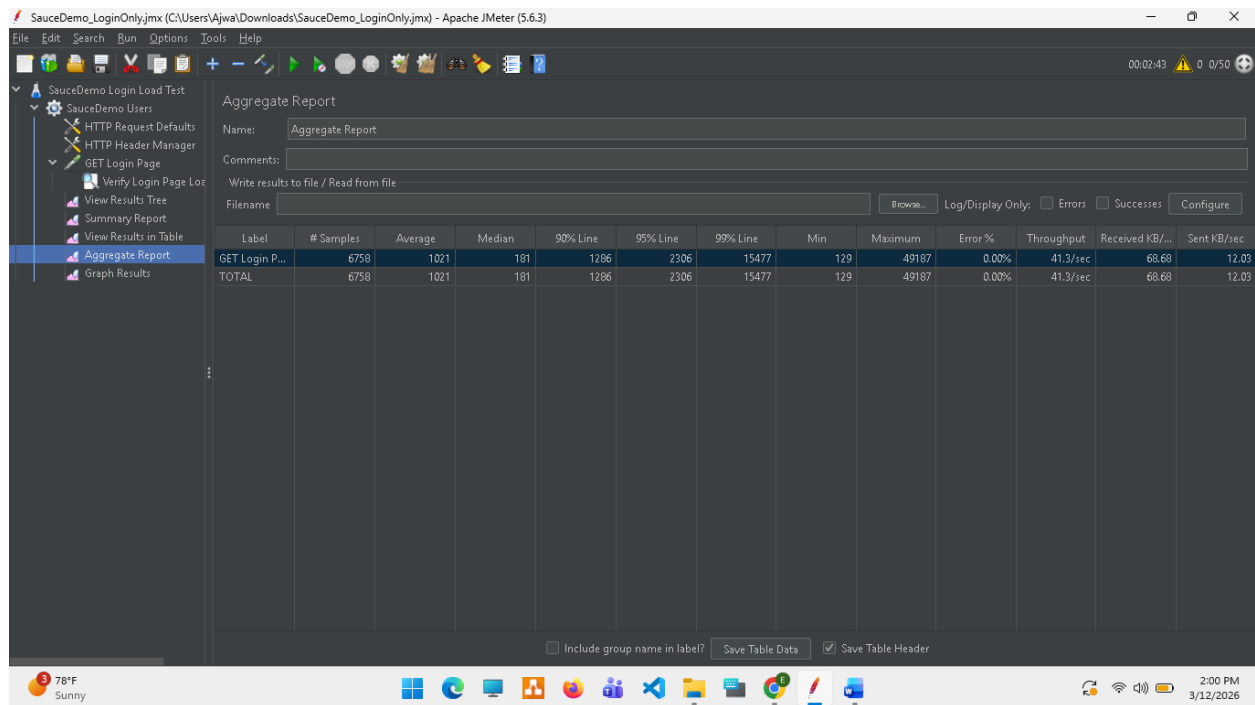

6.3 Summary Report – 100 Users

The screenshot shows the Apache JMeter 5.6.3 interface with the Summary Report for a test named 'SauceDemo Login Load Test'. The report is titled 'Summary Report' and shows the following data:

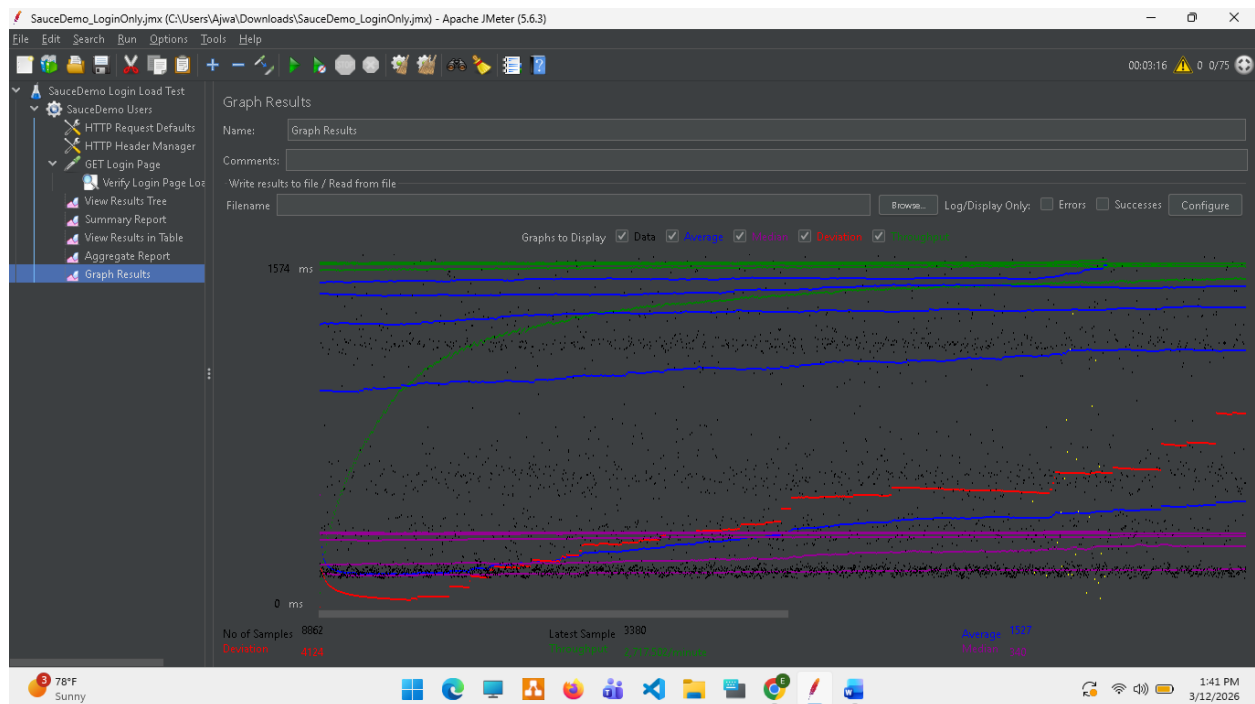

Label	# Samples	Average	Min	Max	Std. Dev.	Error %	Throughput	Received KB/sec	Sent KB/sec	Avg. Bytes
GET Login Page	12688	1981	3	111826	5335.67	1.14%	32.9/sec	55.07	9.46	1714.6
TOTAL	12688	1981	3	111826	5335.67	1.14%	32.9/sec	55.07	9.46	1714.6

The interface also includes a sidebar with navigation options like 'View Results Tree', 'View Results in Table', 'Aggregate Report', and 'Graph Results'. The status bar at the bottom shows the system temperature as 78°F and the time as 1:51 PM on 3/12/2026.

6.4 Aggregate Report

6.5 Graph Results

7. Conclusion

The SauceDemo application successfully handled 100 concurrent users with acceptable response times and error rate remained under 1.2% across all load levels, with 0% errors at 50 users. Performance meets expectations for a demo application. The Fastly CDN effectively manages load through caching.

8. Recommendations

- Increase load to 200+ users to identify the breaking point
- Perform stress testing with gradual load increase
- Test from multiple geographic locations for CDN analysis
- Run an endurance test for 30+ minutes to check system stability
